

JAGADEESH PALLI

Software Engineer

Albany, NY 12209 | +1 571-354-8255 | palli.jagadeesh.cs2024@gmail.com | [LinkedIn](#) | [Portfolio](#)

Full Stack Development | Cloud Security | System Design

Summary

Software Engineer with 4+ years of experience in designing, developing, and deploying scalable, high-performance software solutions. Expertise in Java, Spring Boot, microservices architecture, cloud technologies, Cloud Security, and System Design. Expert in Full Stack Development using Express JS, Angular, Node JS, Next JS, Vue.js, and React JS with strong proficiency in building scalable, secure, and performance-driven web applications. Demonstrated experience in designing and implementing microservices architecture, DevOps practices, and SEO optimization for dynamic web solutions. Proven ability to work across the stack, delivering innovative features, ensuring security, and optimizing performance.

Skills

Methodology:	SDLC, Agile, Waterfall
Programming Languages:	C, C#, Java, Python, C#, C++, Bash/Shell Scripting, PHP
Frameworks/Libraries:	Spring MVC, Spring Boot, React/Redux, Django, Express JS, Angular, Node JS, Hibernate, Next JS, Vue.js
J2EE Technologies:	Java Mail, Servlets, JSP, JSTL, JavaBeans, JDBC, REST API, Microservices, Multi-threading
Web Technologies:	HTML, CSS, JavaScript, XML, JSON, Bootstrap, AJAX, jQuery, Restful API, Redux, SASS, Tailwind
Database:	MongoDB, Firebase, PostgreSQL, MYSQL, Oracle DB, Redis
DevOps/ Testing:	CI/CD, Docker, Kubernetes, Jenkins, Selenium, Jest, Mocha, PyTest
Cloud technologies:	Azure, AWS, GCP, Oracle Cloud, Digital Ocean
Security Protocols:	OAuth2, AuthN/AuthZ, multi-factor authentication, single sign-on, Identity management, IAM, Encryption, Key Management, JWT, SSL/TLS, Cloud Security Best Practices
Version Control/Other Tools:	GitHub, Git, Jira, Figma, MaterialUI, NPM, Docker, Gitlab, API Gateway, Kafka, SEO, MS Office, Postman, GraphQL, JMeter, Microservices, UAT, Ant, Maven, Gradle, Cron jobs
Soft Skills:	OOPs concepts, Algorithms, Data structures, Database management, Systems Design, Time management, Leadership, Management, Problem-solving, DecisionMaking, Documentation and Presentation, Verbal communication
Operating Systems:	Windows, Linux (Ubuntu, CentOS, Fedora, Debian, Red Hat, Linux Mint), Mac OS

Experience

Software Developer New York State Department Albany, NY, USA	May 2025 – Present
- Implemented RESTful APIs and integrated front-end components using Angular, creating dynamic and user-friendly interfaces. - Migrated on-premises applications to AWS, reducing operational costs by 18%. - Designed and implemented RESTful APIs using Java and Spring Boot, reducing response time by 30% and improving API reliability.	
Software Engineer Azilen Technologies, CA, USA	Aug 2024 – April 2025
- Collaborated within an Agile team to deliver 20+ sprints successfully, maintaining a 95% on-time delivery rate. - Conducted regular meetings, presentations, and status updates to keep stakeholders informed and engaged throughout the project lifecycle. - Created scalable microservices using Spring Boot, reducing deployment time with embedded servers like Tomcat. - Reviewed code for adherence to best practices, including clean code principles, naming conventions, and modularity. - Implemented OAuth2 and JWT for user authentication, boosting system security by 30%. - Wrote unit tests and integration tests using Selenium and JUnit, achieving 98% code coverage. - Optimized complex SQL queries in PostgreSQL and MongoDB, improving database performance by 40%. - Automated CI/CD pipelines using Jenkins and GitHub Actions, leading to a 40% reduction in deployment time.	
Software Engineer Northwestern Mutual Planck Technology, DE, USA	Jun 2023 – Dec 2023
- Designed and optimized complex SQL Stored Procedures for data retrieval and reporting, reducing query execution time by 25%. - Developed RESTful APIs using Java, Spring Boot, and Hibernate, enabling seamless integration between services. - Created and deployed microservices architecture for modular and scalable backend systems. - Built dynamic and responsive user interfaces using React.js and Next.js, enhancing user engagement by 20%. - Integrated frontend with backend APIs, enabling real-time data visualization and interaction. - Documented workflows, APIs, and technical specifications, ensuring clarity for future development and maintenance. - Identified and resolved bottlenecks in microservices, improving overall application performance by 15%.	
Java Full Stack Developer Cognizant Technology Solutions, India	Jan 2019 – Jun 2022

- Worked with **Linux** file systems and permissions to ensure data security and efficient storage management, including automating backups and recovery processes.
- Effectively managed stakeholder expectations through clear communication of timelines, deliverables, and project progress.
- Designed and developed web applications using **Spring MVC**, implementing features like request handling, form validations, and RESTful APIs.
- Set up and managed cron jobs to automate recurring tasks like data backups, log rotation, and email notifications.
- Implemented **CI/CD pipelines** using **Jenkins**, **Maven**, and **Gradle**, streamlining the deployment process and reducing downtime.
- Implemented automated testing strategies, increasing test coverage by 25% and reducing production defects by 15%.
- Responsible for implementing UI mockups, integrating third party **React** libraries, and handling/creating **Redux** store data and also responsible for user validations on client side as well as server side.
- Participated in code reviews and used version control tools like Git to track changes and collaborate effectively.
- Verified secure coding practices, such as input validation, output encoding, and compliance with OWASP standards.
- Documented project workflows, ensuring clear communication among stakeholders.
- Automated build and deployment processes using **Docker** and **Kubernetes**, significantly reducing deployment time.

Education

Masters in Computer Science: (3.6 GPA)

George Mason University, Virginia, USA

Aug 2022 – May 2024

Bachelor of Technology in Computer Science & Engineering: (3.3 GPA)

Aditya Institute of Technology and Management

Jun 2016 – Sep 2020

Certifications

[Azure AI Fundamentals](#)

[Azure AI Cloud Engineer Associate](#)

Projects

Auditing for Bias – May 2023

Project Description: Assessed potential racial bias in a machine-learning model using the ProPublica COMPAS dataset, aimed to understand disparities in false positive rates and calibration for African-American and Caucasian defendants, and explored the implications of algorithmic decision-making in criminal justice.

- Assessed potential racial bias in a machine-learning model using the ProPublica COMPAS dataset, aimed to understand disparities in false positive rates and calibration for African-American and Caucasian defendants, and explored the implications of algorithmic decision-making in criminal justice.
- Findings indicated that the algorithm was more likely to falsely predict recidivism for African-American individuals, highlighting significant societal implications and the need for fairness in algorithmic decision-making.
- **Programming Languages Used:** Python
- **Algorithms & Techniques Used:** Linear Regression, Decision Trees, AdaBoost, ROC Curve Analysis

Food Munch (Web Application) – May 2023

Project Description: Designed and developed an interactive web application for a restaurant, focusing on user engagement and streamlined ordering. Introduced an intuitive menu navigation, a dynamic virtual cart, and a customizable spice level feature using visual icons. Implemented a real-time kitchen-side interface for efficient order tracking and management.

- Pioneered the creation of a user-centric web application, fostering seamless menu browsing, dynamic sorting options, and real-time cart modification, reinforced by a local storage-based review system, culminating in a streamlined ordering process for heightened user satisfaction.
- **Software Technologies Used:** HTML, CSS, JavaScript, Bootstrap, Angular

Campus360 - Full-Stack Application Development – August 2023

Project Description: Created a comprehensive full-stack application geared towards the administration of student surveys linked to campus visits. This multifaceted application consists of front-end and backend components meticulously designed to optimize user experience. Prospective students will be able to seamlessly complete survey forms, sharing their valuable feedback regarding their campus visit encounters. Meanwhile, users will have the ability to access and review a repository of all previously recorded surveys, ensuring a transparent and data-driven approach to campus visit management.

- **Front-end Technologies Used:** HTML, CSS, Angular, Java Script
- **Back-end Technologies Used:** Spring Boot, RESTful API Services, JDBC
- **Database Tools Used:** My SQL Workbench
